

Pulsa No Entry Warning System

Sadly, its becoming a regular news headline that reports drivers taking the wrong turning at motorway slip roads, putting them on the wrong carriageway and on a dangerous collision course with other unsuspecting drivers.

A successful, cost-effective solution introduced to the roads of Northern Ireland, is to add red warning lights to augment the No Entry Signs at the bottom of the slip. This provides an additional layer of warning to drivers who may be considering the fatal manoeuvre.

The Simmonsigns LED Pulsa is the ideal solution for this application having outstanding visibility and proven durability. Installed for over 17 years, more than 300 Simmonsigns Pulsa's have been working away 24 hours per day 365 days per year for a total of over 149,000 hours each with no reported failures.

Eric Woodhouse, Northern Ireland Sales Manager says, "The installation of our LED signals over 17 years ago has produced results beyond our expectations. The savings in maintenance costs and the contribution to safety has been very significant."

A genuine success story helping to save lives and reduce costs.
